Statement on behalf of the Mineral Products Association (MPA) (Additional Comments).

Independent Examination of Peak District National Park Development Management Policies; Examination in Public.

Matter 3 – Overview of Soundness
2. Paragraph 116 of the Framework resists major developments in National Parks except in exceptional circumstances and where it can be demonstrated they are in the public interest. Would policies DMC1 and DMMW1 be consistent with the Framework and the Core Strategy policies GSP1 and DS1 in as far they would restrict major development? Should any modifications to those policies be considered?

The following comments are in addition and in support of the previous statement made on behalf of the MPA in respect of Matter 3 (Question 2) of the Inspectors Matters and Issues.

In the original statement the MPA commented as follows;

Of equal concern is the supporting text for DMMW1 at paragraph 11.1, notwithstanding the proposed modification (M11.1; page 60) of the DMP document which as modified states;

_The Core Strategy Policies MIN1 to MIN4 set out the overall strategic context for minerals development in the National Park. The NPPF requires that when determining planning applications, local planning authorities should, as far as is practical, provide for the maintenance of landbanks of non-energy minerals from outside National Parks. The general direction of core strategy policy is therefore to continue to enable progressive reduction in mineral working in the National Park._

This text is unsound because it is not Consistent with National Policy – the plan does not enable the delivery of sustainable development in accordance with the policies in the Framework.

The effective conclusion in the last sentence, which states, ‘_The general direction of core strategy policy is therefore to continue to enable progressive reduction in mineral working in the National Park_’, constitutes a policy of _managed retreat_ for minerals from the National Park which is far in excess of the requirement of National Planning Policy and is unsound. As previously stated the ‘_as far as practical_’ clause is important as it reflects the fact that minerals can only be worked where they occur, and it may not be practical or viable to provide for or extract material from outside of National Parks and ensures in the interests of sustainable development that finite workable mineral resources are not sterilised.
In support of the concerns expressed by the MPA on this topic we refer to the recent *West Sussex Joint Mineral Local Plan (Schedule of Proposed Modifications January 2018)* and specifically MMI and MM2 on page 3&4 on the document which are reproduced below.
The above modifications were made at the direction of the Inspector (Jonathan Manning) as the original proposal by West Sussex was to have in effect a managed retreat of mineral working from the National Park which was considered unsound and not consistent with National Policy concerning development in National Parks. We believe a similar circumstance exist with the policy proposal put forward by the Peak District National Park. A link to the full West Sussex Modification schedule is below.
